

## MaxTrak® (SLT)

### Slotted Deflection Track for non-structural drywall framing

The ClarkDietrich MaxTrak (SLT) system is a head-of-wall deflection track that is used for framing exterior curtain walls and non-load bearing interior walls. This system allows for vertical live load movement of the primary structure without transferring axial loads to the wall studs. The MaxTrak system is attached to the wall studs through vertical slots using waferhead screws creating a positive connection that allows for vertical movement and also eliminates the requirement for lateral bracing near the top of the wall stud.

The slots in the track's legs are designed for a total allowable vertical movement of 1-1/2" (3/4" +/-). The MaxTrak system must be designed to take the end reaction of the wall studs (point loads) by using the allowable loads below.

#### Calculating MaxTrak point load:

Point Load (P) =  
(wind pressure PSF) x (spacing FT)  
x (wall length FT) / 2

Example:  
(5 PSF) X (1.33 FT) x (9.5 FT) / 2 = 31.7lbs
