

DynaMax Plus Structural Aluminum Suspension System

This system provides the accessibility and flexibility of DynaMax® grid but with enhanced load-carrying capacity for 6' and 8' rod drops.

#### KEY SELECTION ATTRIBUTES

- Allows for longer spans (6' and 8') while also providing greater load-carrying capacity
- 6' spacing allows for direct attachment to steel joists or pre-cast concrete tees
- Spanning 6' or more eliminates the need for slotted strut channel at deck/roof level and creates more space for critical MEP components
- Eliminates up to 1/2 of threaded rods/accessories utilized today for typical 48" hanging spans
- Ideal combination of a finished ceiling system with a structural solution
- Easy integration into a conventional grid system using AXTBC clip and DynaMax® Plus boss channels
- Can integrate seamlessly with select Armstrong® ceiling panels for a complete ceiling system solution
- Suspension system has continuous threaded boss channel, allowing 3/8"-16 threaded rod to be installed to the suspension system at any location

#### COLORS

Standard

White  
(WH)

Available in  
any color!

White is standard color for main beams and cross tees. All brackets and hardware are unfinished. Custom colors and finishes are available for main beams, cross tees, perimeter molding, and ceiling panels. Contact Armstrong Customer Service 877 276-7876

TechLine 877 276-7876

[armstrongceilings.com/datacenter](http://armstrongceilings.com/datacenter)

#### TYPICAL APPLICATIONS

##### For Data Center Applications

- Provides a suspension platform or attachment for data center cable trays, equipment, partitions, and hot and cold aisle containment barriers from building structure to below the ceiling plane
- Finished ceiling system offers a containment barrier to protect servers from debris
- Controls airflow by eliminating penetrations
- Grid provides increased temperature and pressure management, reduced leakage, and enables the best hot and cold air containment at the ceiling plane when compared to other ceiling types
- Available with Ultima® AirAssure® panels with factory-gasketed edges to provide even greater temperature and pressure management
- Lighting, diffuser, and containment options are available from our Data Center lighting and MEP partners

- Data Centers
- Laboratories
- Hospitals
- Industrial Warehouses/  
Distribution Centers
- Retail/Convenience Store

ACCESSORIES FOR METALWORKS LAY-IN CEILING PANELS

6483H35 – MetalWorks Lay-In Perimeter Hold-down Clip for DynaMax Plus – Screw attaches to perimeter molding to hold the perimeter cut MetalWorks panels in place. Two clips required per cut panel.

6483H35 – 10 PCS

8200T10 – 1" Fiberglass Infill Bag –  
24 x 24 x 1"  
Color – Black (gloss)

8200T10 – 12 PCS

PHYSICAL DATA FOR METALWORKS LAY-IN CEILING PANELS

Design Considerations

MetalWorks panels and DynaMax and DynaMax Plus grid are manufactured at separate facilities that use different paint systems. Colors i.e. White and Whitelume will coordinate but are not exact color matches.

Material

All MetalWorks panels: Aluminum - 0.064"

Warranty

One (1) year limited warranty for MetalWorks items. Details at [armstrongceilings.com/warranty](http://armstrongceilings.com/warranty)

#### DATA CENTER CONTAINMENT PARTNER

# SUBZERO

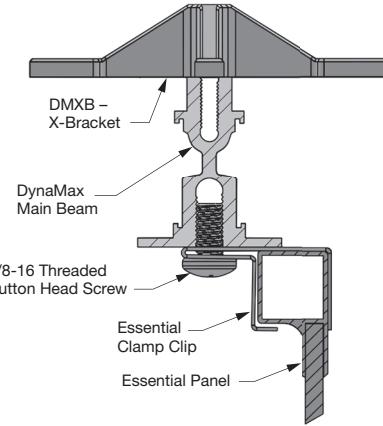

## ENGINEERING

A SENNECA COMPANY

For more data center containment details, visit [subzeroeng.com](http://subzeroeng.com)

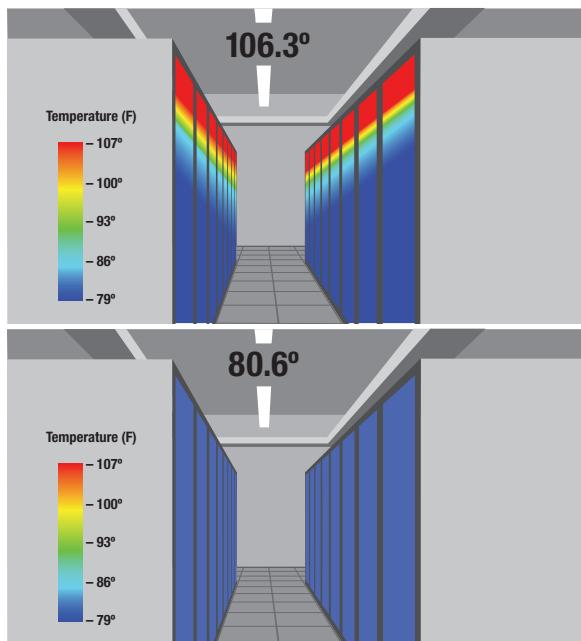

The Subzero Engineering and Armstrong World Industries partnership is the latest development in the portfolio expansion of data center products and services, seamlessly combining structural ceiling solutions with high performing and energy efficient air containment systems.

The Subzero Essential Clamp Clip (shown right) was designed specifically for integrating Subzero Essential Series Wall Panels with DynaMax® and DynaMax® Plus main beams. This provides easier attachment and improved installation efficiency.

NOTE: Detail in this section shows standard DynaMax suspension system; however, Subzero Essential Clamp Clip is also compatible with DynaMax Plus suspension system.

#### TEMPERATURE AND PRESSURE CONTROL ADVANTAGES

DynaMax and DynaMax Plus structural grid systems provide increased pressure management, reduced leakage, and enables the best hot and cold air containment at the ceiling plane when compared to other ceiling types.

Unlike drilled hole or slotted strut ceilings, the integration of DynaMax and DynaMax Plus grid and Armstrong® Ceiling Panels keeps ceiling planes closed for improved pressure and temperature control where it matters most, such as data center halls.

A 2021 Computational Fluid Dynamics (CFD) simulation showed that, on average, the top of data center cabinet equipment is approx. 26°F warmer when a slotted strut ceiling (top left) is in place and approx. 6°F warmer with drilled hole ceiling (not shown) than with the DynaMax and DynaMax Plus structural grid systems (bottom left).

#### PHYSICAL DATA
